BROWLIFT

What is Brow Lift ?

BROW LIFT is also known as forehead lift or browplasty. A BROW LIFT or forehead lift helps to tighten the soft tissues of the forehead to obtain a more youthful contour to the forehead skin, upper eyelids and eyebrows. There are many brow-lift procedures, which involve different length incisions in various locations and sometimes also involve an endoscope. A youthful brow at rest is positioned above the orbital rim, with an arch laterally, and the lateral end or 'tail' of the brow located higher than the medial end. With aging, it is common for the brow to assume a flat or horizontal position. If a saggy brow inhibits the facial expression, a BROW LIFT is a good option for rejuvenating the upper third of the face. Every year, thousands of people undergo successful brow-lift surgery and are extremely satisfied with the outcome.

WHO NEEDS IT?/ CANDIDATURE FOR BROW LIFT / Suitable candidate for BROW LIFT :

The need for BROW LIFT :

Saggy or low eyebrow position creating a tired sad and grumpy look.

Deep horizontal creases developed across the forehead.

Frown lines or furrows seen between the eyebrows or across the top of your nose.

Excess skin or fatty tissue hanging over the eyes.

The central portion of the brow hanging down, making an angry appearance.

Females unable to apply makeup on the upper eyelid, since the surface area is showing drooping tissues due to signs of aging.

Eligibility to undergo a BROW LIFT :

Any of the above mentioned reasons makes you a suitable candidate to undergo BROW LIFT , But to be an eligible candidate for surgery you should also fulfill the following criteria:

Every surgical procedure including plastic or cosmetic surgery involves certain risks. You should undergo a BROW LIFT only if you have a medical requirement or you feel that the particular surgery will enhance your quality of life.

You shall be a good candidate for the BROW LIFT if you are healthy, you have realistic expectations from the outcome of the surgery and you are aware of all the risks associated with the procedure.

You cannot consider undergoing a cosmetic surgery if you have serious health issues like diabetes, heart diseases, high blood pressure, bleeding disorders like haemophilia or depression.

You shall not be a good candidate for the BROW LIFT if you smoke or drink too much alcohol.

You should have positive attitude!

Your expectations from the outcome of the surgery should be realistic.

You should be ready to miss at least a few weeks of normal activity.

Benefits Of Brow Lift :

Helps to reposition a low or saggy brow that hangs over the upper eyelid.

Raises the eyebrows to a more attractive and youthful appearance.

Makes one look cheerful, pleasant and easily approachable.

BROWLIFT

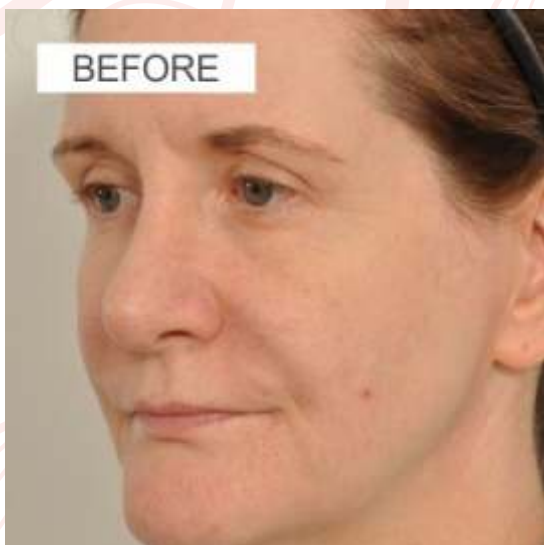

1.1- Coronal brow lift, very large incision

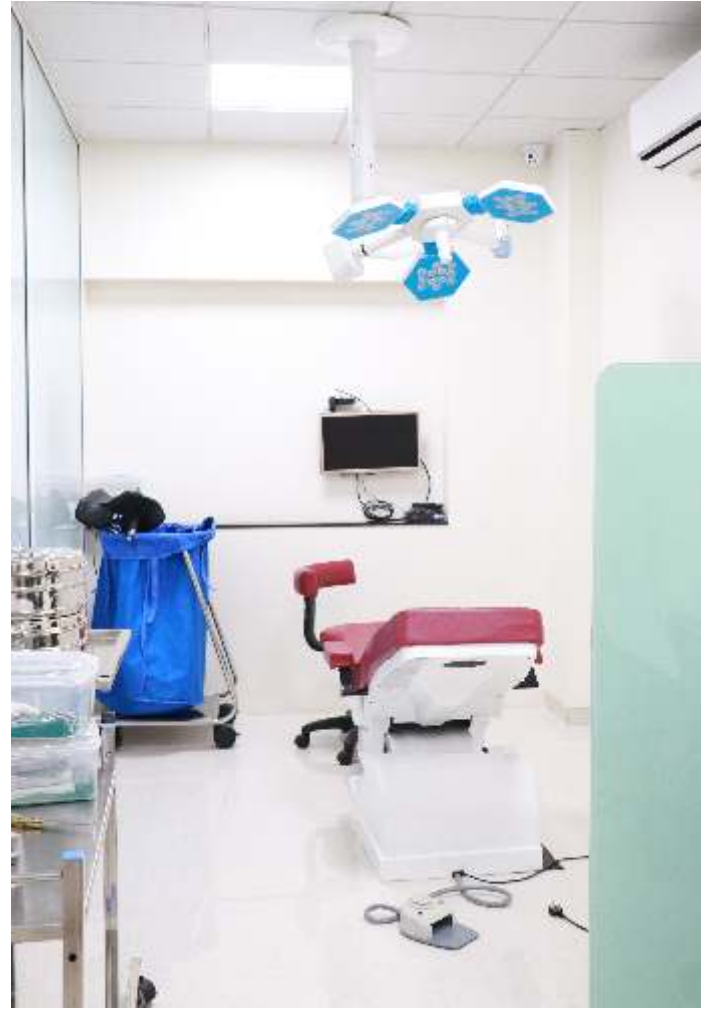

1.2- Direct brow lift, incision is just above eyebrow

1.3- Endoscopic/ telescopic camera method, with small incisions hidden in hair line
