Apart from these best medical standards, Patients find benefits in their lives in many aspects with much improved ,physical and mental health.

GENITAL REJUVENATION

What is Genital Rejuvenation ?

It mainly involves vaginoplasty (that is “tightening” of the vagina) and/or labiaplasty or vulvoplasty (reshaping of the vulva or labia, that is the outer and inner lips of the vagina). Genital rejuvenation is associated with women and has gained immense popularity recently. The surgery is extremely beneficial for women who wish to undergo recontouring after childbirth, plan for significant weight loss, also aging or injury to genital structures. Genital rejuvenation is a boon for women since it enhances their self-confidence and also enhances the comfort. In Genital REJUVENATION women can consider G-Spot Amplification or Hymenoplasty also.

Genital TIGHTENING

Following childbirth during aging or due to trauma, the vulvoGenital structures and muscles get damaged & may become lax & weak.

Kiegel’s exercises (pelvic floor exercises) do help but may be inadequate to restore pre-pregnancy tone. These changes may lead to decreased sexual gratification, especially for the female partner.

Vaginoplasty or Genital rejuvenation surgery tightens the lax Genital musculature & surrounding tissues & reduces excess Genital lining (mucosa).

The result – greater muscle contraction strength & enhanced sensations, dramatically sprucing up your sexual life.

LABIAPLASTY

The labia majora are the outer fleshy lips at the Genital opening which generally cover the delicate inner lips (labia minora).

Enlargement of the labia minora can lead to embarrassment during intercourse or even irritation in tight clothing or may just be a cosmetic blemish.

Labia reshaping is a safe & effective surgery to restore genitalia to their natural form and eradicate associated irritation. The procedure has nothing to do with the Genital canal.

G SPOT AMPLIFICATION

‘G spot’ is the highly sensitive zone of erogenous stimulation in females along the anterior Genital wall.

G spot enhancement using injectable collagen alters the shape & increases the size of the G spot dramatically increasing sexual satisfaction.

HYMENOPLASTY

The hymen is a thin ring like membrane at the lower 1/3 of the vagina which when intact is synonymous with virginity across all cultures & continents.

The hymen can be broken due to a variety of reasons, notably

Sexual intercourse: most common

Tampons, any insertable devices

Strenuous physical activity

Trauma

Rupture of the hymen is usually accompanied by Genital bleeding which is the commonly accepted sign of defloration. Hymenoplasty or Revirgination restores & repairs the hymen to its virginal state and also tightens & Genital walls as an additional bonus.

WHO NEEDS IT?/ CANDIDATURE FOR GENITAL REJUVENATION

Who is the best candidate for Genital REJUVENATION ?

If the shape and structures of the vagina has been altered

Your vagina has lost elasticity over time.

If there is experience of soreness or pain during sexual activity or riding a bicycle, horseback riding etc.

There is loss of sensation while having sex which can possibly be a result of multiple Genital deliveries.

Benefits Of Genital Rejuvenation

You regain shape of vagina

Your vagina gets lost elasticity and it becomes tighter than before

You may enjoy sex activity than before

PHYSICAL APPEARANCE:

Youthfulness

Ageing is a natural process which everyone goes through. Visible wrinkles, fine lines, blemishes are signs of ageing. Such skin flaws makes you look tired or aged. But with Genital REJUVENATION like suitable treatment one feels younger, healthier and rejuvenated.

Natural:

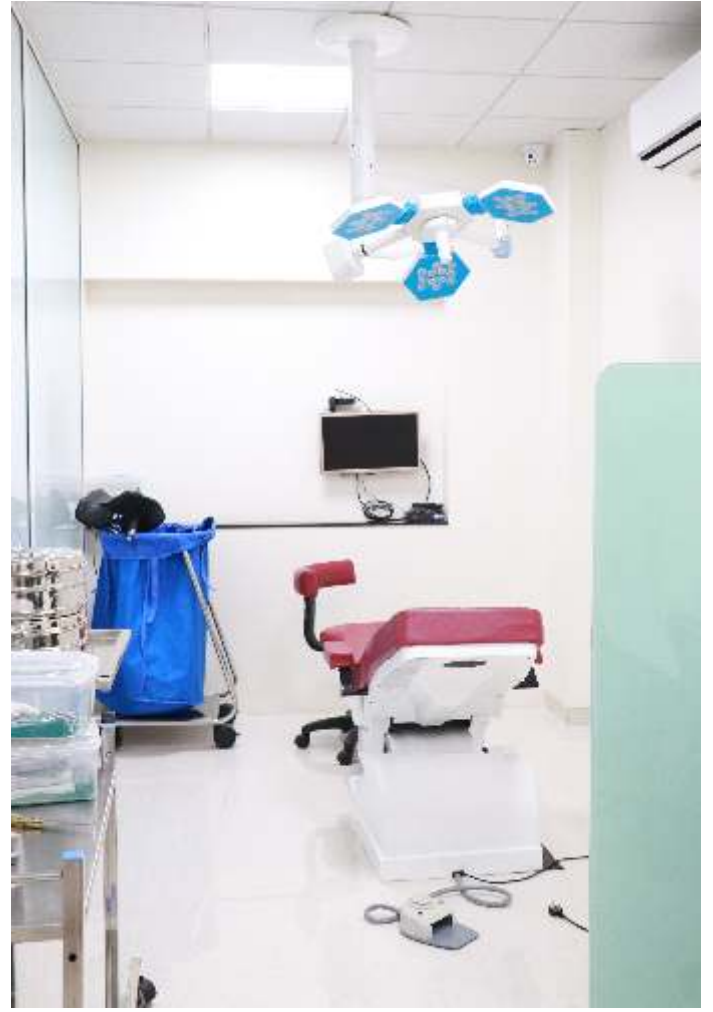

Nowadays Genital REJUVENATION is gaining immense popularity because it produce results that blend extremely well with a patient's body aesthetics. Soon after the surgery, one gets back to the desired or normal shape of a treated body part. One does not have to wait long to see the result, which is the beauty of cosmetic surgery.

INCREASED CONFIDENCE AND ENHANCED MENTAL HEALTH:

Self Confidence is a tool that helps us face challenges and tackle problems in life, with great certainty. When you look good, you feel good which in turn increases your self confidence. It leads to greater willingness to try new things or open up in social situations. You become more willing and open to wearing certain clothes or participating in activities which you avoided prior to surgery, due to discomfort in your appearance.

Certain clinicians and psychologists feel, few corrections in your body parts, by cosmetic surgery can not only lead to emotional wellness but also enhanced mental health.
