# NECKLIFT

## **What is Neck Lift ?**

Neck lift is also commonly known as platysmaplasty or cervicoplasty.

## **WHO NEEDS IT ? / CANDIDATURE FOR NECK LIFT / Who is the best candidate for Neck Lift ?**

Many individuals neglect the appearance of their neck; but the neck is the first place which shows signs of aging. Fatty jowls, a “turkey wattle,” vertical banding and horizontal creases all work together to make us look older than we actually are.

## **Suitable candidate for neck lift / Need for a neck lift :**

Damaged neck skin due to sun exposure.

Excess neck skin or neck fat.

A turkey wattle that makes you look much older than your real age.

Excess wrinkles on your neck

A double chin or too much skin under the jaws.

Too many lines and folds developed on the neck.

## **Eligibility to undergo a Neck Lift :**

Any of the above mentioned reasons makes you a suitable candidate to undergo neck lift. But to be an eligible candidate for surgery you should also fulfill the following criteria:

- Good physical health.
- Positive attitude.
- Realistic expectations from the outcome of the surgery.
- Should be ready to miss at least a week of normal activity.

Every surgical procedure including plastic or cosmetic surgery involves certain risks. You should undergo a NECK LIFT only if you have a medical requirement or you feel that the particular surgery will enhance your quality of life.

You shall be a good candidate for the NECK LIFT if you are healthy, you have realistic expectations from the outcome of the surgery and you are aware of all the risks associated with the procedure.

You cannot consider undergoing a cosmetic surgery if you have serious health issues like diabetes, heart diseases, high blood pressure, bleeding disorders like haemophilia or depression.

You shall not be a good candidate for the NECK LIFT if you smoke or drink too much alcohol.

## **Benefits Of Neck Lift**

A neck lift improves the appearance of the neck by tightening the skin and the underlying muscles and enhances the contour of the jawline.

## **Advantages of NECK LIFT**

It can remarkably improve your neck and jawline.

Makes a person look years younger.

It can also give an impression of weight loss.

It enhances your confidence.

## **Disadvantages of NECK LIFT**

The neck may feel a bit stiff for months after surgery.

There is a possibility of fluid accumulation or bleeding post-surgery.

It may make your other facial features look more aged compared to the neck after a neck lift.

If you wish to undergo a neck lift for specific goal or need, what is unique to you, please consult your aesthetic plastic surgeon.
