PRP THERAPY

What is PRP THERAPY ?

PRP Therapy

The term PRP therapy is mainly associated with management attention and maintenance for hygiene and cosmetology involving the hair growing the scalp,

The term generally does not involve the facial and other body hair.

Clinic Chrysalis provides a range of highly potent Hair Treatments especially tailor made for both men and women.

Hair assessment by a renowned cosmetic surgeon is very essential to determine the location to remove the hair follicles for transplantation.

The doctor will finalize a location that is discreet and surrounded by other hair which will help cover up or hide the scar.

The Strip harvesting procedure will leave a big linear scar at the back of the head. Or else, there will be many graft sites and multiple pencil-point scars that can be easily covered up with the help of other hair.

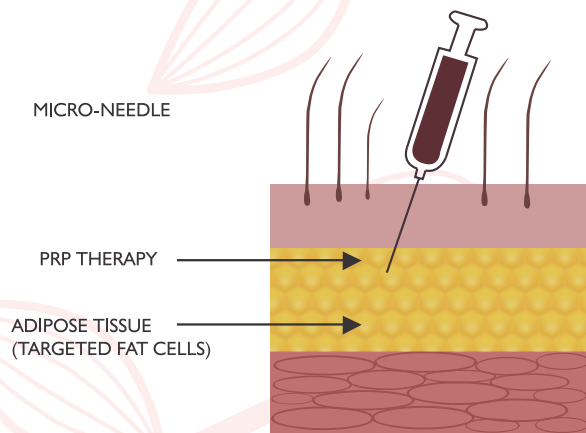

There are chances that a Flap surgery and scalp reduction will create considerable big scars that may become more evident if further hair loss is encountered.

The cosmetic surgeon will definitely guide and provide an indication of the likelihood or chances of any such occurrence.

PRP THERAPY (Platelet Rich Plasma Therapy)

PRP (Platelet Rich Plasma Therapy) injection into the scalp with extremely thin needles is a proactive option for men and women with hair loss. The end result is a full healthier head of hair

PROCESS

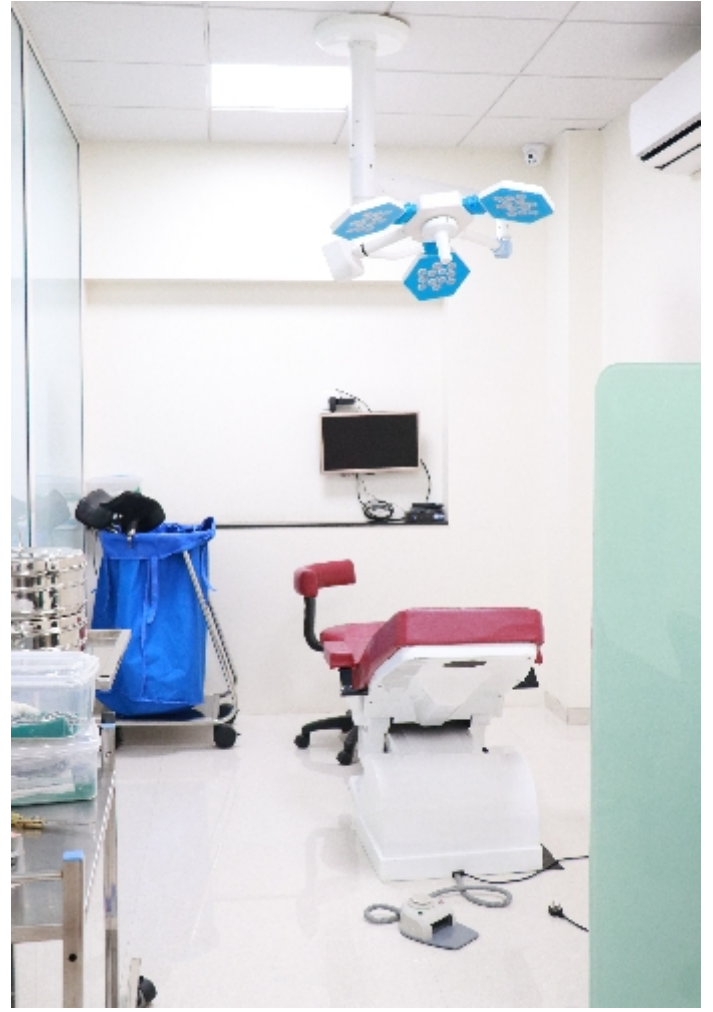

HAIR TREATMENT (PRP THERAPY)

PRP PROCEDURE

In the PRP procedure is your own good cells harvested from your scalp and injects into recipient area, So your own cells will not be rejected by your immune system. Medical staff draw a sample of your blood, which is placed in a centrifuge, which spins around very fast, causing blood components to separate. Lab person can separate plasma and injects into recipient area.
